Indra500 compatibility with Odin II Pentax

The Odin II Pentax has featured new functionality in which a firmware (version S.W V3.00) update is required with existing Indra500. This guide will help to highlight the changes.

Firmware update
1) Connect the Indra500 to the computer via USB cable
2) Run the firmware updater
3) Load the firmware (.FDS file) and icon(.FIF file) via the software and icon option
4) Disconnect the Indra500

Note: Firmware S.W V3.00 is NOT compatible with current Odin II Canon and Nikon transmitter

Changes
1) Under RX setting, Odin-C, Odin-N, Odin-S, Strato II becomes Odin II and Ares II respectively (For Strato II please use the Ares II setting, and for Odin II Pentax please use the Odin II setting)
2) Channel 1-4 now supports group D and E as well as digital ID (Odin II Pentax transmitter and Ares II support)
3) The Menu page has been reduced to 3 pages (Menu 4 will be removed)
4) The following feature will be moved to C.Fn (custom function) in Menu 3: Buzzer, quick flash, display color and auto rotate
5) When using Odin II Pentax, the Indra500 display will reflect the power setting on the Odin II Pentax transmitter in real time.
